

ATTENTION TEACHERS IN GRADES 4-6

Empower your students to TAKE ACTION and make a difference through energy efficiency.

The **Take Action at Home** program, endorsed by the Science Teachers Association of New York and the New York State Technology Education Association, combines thinking and talking about energy with strategies to save energy at home. The New York State Energy Research and Development Authority (NYSERDA) is providing this hands-on workshop at **no cost**. Participating teachers receive a tool kit containing energy efficient technologies and a selection of instructional materials correlated to the New York State Learning Standards. Every student receives a take-home kit to make their home more energy efficient. Incentives and prizes are available for implementing actions at home and submitting energy action plans.

"This workshop was very interesting, it's easily adaptable to my class. The packs of resources and kits are wonderful!"

-A teacher, after attending a Take Action at Home workshop

Enroll NOW to participate in this limited-time offer.

**THINK!
ENERGY**
